

MUSTANG SURVIVAL / HIT™ INFLATABLE WORK VEST

INFLATOR REPLACEMENT REQUIRED FOR HIT™ INFLATABLE WORK VESTS PURCHASED IN 2012

HIT™ inflator mechanisms must be replaced within the expiry year noted on the inflator to maintain USCG approvals and to meet carriage requirements.

Units can be maintained with the purchase of Mustang Survival **Re-Arm Kit C** (model MA7214.)

HIT™ INFLATABLE WORK VEST / MODEL MD3188

Available exclusively from Mustang Survival, the HIT™ Inflatable Work Vest pioneered the standards as the very first inflatable work vest ever approved by the US Coast Guard. With a low-profile fit and 38LBS buoyancy when inflated, it offers enhanced mobility and reduced heat stress, along with the added safety of extra flotation and self-righting performance.

Made for the most severe marine environments, Hydrostatic Inflator Technology (HIT™) offers reliable inflation in a low maintenance design that will automatically inflate when submerged in 4 or more inches of water, and not inadvertently due to rain, spray or humidity.

This technology is exclusive to Mustang Survival in North America and maintenance-free for 5 years from date of manufacture or until inflated. When the inflator expires or is used in an inflation, it needs to be replaced. The inflator expiry date is clearly visible through the inflator inspection window on all HIT™ Inflatable Work Vests and PFDs. The replacement components can be purchased as part of Mustang Survival **Re-Arm Kit C** (model MA7214.)
