Aqua Lung has released an update for the i450T which can be performed by connecting it with Diverlog. If you have any questions about how to complete this update please let me know and I would be happy to help. This update will address the following issues that the dive computer was having:

I450T / Time Drift (Watch running faster than normal)

This fix is included in the 1C 06 version

I450T / High Current (High Battery Consumption)

This fix is included in the 1C 06 version
